DETAILS

NEOPRENE AND OPEN CELL INFORMATION

Neoprene is a closed cell flexible rubber material that repels water and has great insulation and protection qualities. Generally neoprene items have a high perceived value due to the dense, yet soft nature of the product.

Scuba/Open Cell foam absorbs water. The ability to absorb condensation from cans and bottles is one of the benefits of this product when used in beverage insulators. This foam is made from 100% polyester which results in much lower costs. Open cell foams do have good stretch qualities but generally these qualities are not as long lasting as neoprene.

SCREEN COST

- \$40 - per color
- \$50 - 4 color process
- Leadtime 2-3 weeks
